

New version format for Atlas

Atlas is getting a new way of software versioning.

First it was: 2511.18.11

Where 25 is the year, 11 the month. 18 the day and 11 the version.

Im changing to this format

25S3.0

Where 25 is the year, S stands for season. So Winter, summer. So S1 is Winter, S2 is Spring S3 is Summer and S4 is autumn. And the 0 is the version. So if the 0 is for example .1 It means its the 2nd version of that season

This format is easier to read. And easier to identify if there is a new version available.
